Bidirectional and Regenerative

Clean grid current:

THDi < 3%and PF > 0.98

Parallelization of units to increase the power

The most flexible testing equipment in a single cabinet

HIGHER SWITCHING FREQUENCY

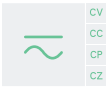
Thanks to the SiC MOSFETs in our equipment, the switching is increased up to 60 kHz.

BANDWIDTH

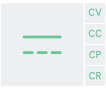
A higher bandwidth of the converter translates into better capacity to control fast-changing and high-frequency signals.

RIPPLE

Improved current ripple (by a factor of 3) and voltage ripple (by a factor of 2.75).



AC



DC

EFFICIENCY

The peak efficency of the whole system is boosted above 94% thanks to the SiC Technology.

CURRENT IN DC MODE

Higher current rating in DC, now equal to the AC current rating.
